

Anna Bligh MP

LAI'D UPON THE TABLE OF THE HOUSE  
THE CLERK OF THE PARLIAMENT

Queensland  
Government

Deputy Premier,  
Treasurer and  
Minister for Infrastructure

13 DEC 2006

Mr Neil Laurie  
The Clerk of the Parliament  
Parliament House  
George Street  
BRISBANE QLD 4000

Dear Mr Laurie *Neil.*

Petition No. 691-06 has been forwarded to my office by The Honourable Kerry Shine MP, Attorney-General and Minister for Justice and Minister Assisting the Premier in Western Queensland, as this matter falls within the responsibility of my portfolio.

It is acknowledged that for many people, the decision to build the Wyaralong Dam is not welcome.

The proposed dam will rely on a very well documented catchment and when operated with the proposed Cedar Creek Weir, will provide a valuable resource of water for the Logan area and South East Queensland grid.

Dams are just one part of a broader strategy to address the supply and demand sides of the water balance equation, including better utilisation and conservation of the water already in existing dams, cutting waste and excess use and adopting new technologies including recycling and desalination.

Work currently underway to support the water supply strategy includes:

- Advancing the first stage of the Western Corridor Recycled Water Scheme to supply industry;
- Design and early work for a desalination plant at the Gold Coast;
- Construction of the Southern Regional Water Pipeline that will help to create a water grid, linking existing and future water supplies and distributing water across the region;

- Significant water efficiency subsidies and incentives for home owners and businesses to use less water and to capture their own supplies where possible.
- Subsidies to support Local Councils implementing measures to reduce water distribution system leakage.

Other strategies to increase supply and reduce demand in our region which are currently being implemented include:

- Managing demand (for example, targets for reducing consumption, water-sensitive urban design, targets for recycling, residential efficiency measures such as rainwater tanks);
- Managing wastage (for example, reducing mains pressure and fixing leaks);
- Additional storage infrastructure (new storages and/or raising existing storages); and
- Investigating potential groundwater sources.

Population projections indicate that there could be more than one million extra people living in the South East Queensland region in the next 20 years, with further growth beyond this. This will place enormous pressure on our water supplies. Even with the adoption of stringent water demand management measures and the implementation of recycled water and other water supply initiatives, it will still be necessary to supplement our supplies with water from new dams. Otherwise, we will quite simply not have enough supply to meet demand.

I wish to stress that if there was a comparable alternative to the Teviot Brook Dam at Wyaralong that could ensure that the region's water supply was secured into the future with minimised social impacts, it would certainly be undertaken.

The Government remains strongly committed to ensuring that communities impacted by these important infrastructure projects are fully engaged throughout the projects' development. An extensive suite of community engagement processes are either in-train or about to commence.

I'd like to thank all 406 signatories for bringing their concerns to my attention.

Yours sincerely

**Anna Bligh MP**  
**Deputy Premier**  
Treasurer and  
Minister for Infrastructure
